Taxonomy

A taxonomy is a system for organizing content according to shared characteristics. A faceted taxonomy is a particular kind of taxonomy that consists of a series of separate but related vocabularies that are used for describing different entities in the domain. Each facet represents a discrete aspect of the content which is of importance to the business. The facets for this taxonomy are: content type, region-country, mechanism, subject, and target population. There is one tab per facet in this workbook. A facet can be comprised of one or many taxonomy nodes, or branches, which are groupings of one or many terms that appear in the hierarchy. For example, in this taxonomy, health and environment are two Level 1 preferred terms of the subject facet that represent nodes because Level 2 preferred terms are grouped beneath them in the hierarchy.

Taxonomy terms and their placement were created based on analysis of:

[Client] public website

[Client] Portal (selected areas)

Controlled Vocabulary Lists

Search Term Logs

Analysis of card sort exercise data. Card sort exercises were conducted online as well as in-person at the [Client] offices in Durham, NC and Washington DC, July-August, 2012. There were a total of 58 participants from a variety of business units within [Client Company] including:

- Health Services Research
- Communications
- Cost and Pricing
- Research to Practice
- Human Resources
- Operations (COO)
- Knowledge Services
- Regulatory Affairs and Quality Assurance (RAQA)
- Business Solutions
- Education
- Global Portfolio Management (GPM)
- Civil Society and Peacebuilding Department (CSPD)
- Gender
- Social, Environmental and Economic Development Group
- Strategic Planning and Analysis
- Global Connections
- Global Health, Population and Nutrition (GHPN)
- Information Technology Applications Department
- Asia Pacific Regional Office (APRO)
- Africa Regional Office (AFRO)

Column Definitions:

Preferred Terms. A subset of all terms that are accepted as the official, enterprise-wide terms to describe items and ideas. Terms can potentially be placed in one of four levels. Lower terms inherit the properties of higher terms.

Equivalent Terms. All other terms used in the enterprise, including synonyms (also known as "nonpreferred terms").

Related Terms. Terms that are associated with the preferred term, but do not have a direct one-to-one correlation with the preferred term.

Scope Notes. A definition for a term in a taxonomy. In addition to defining the term and distinguishing between terms with overlapping meanings in natural language, a scope note may also provide guidance on term usage, such as under what circumstances the term should be used for tagging, and when a different term should be used.

Comments. These include general notes, or any remarks relating to the taxonomy term.

Open Issues. Notations of any potential problems in term usage that require resolution or input.
